Or simply want to join a great group and learn new skills? Don't wait any longer! Contact us and make sure you have a spot in an unforgettable journey!

What is iGEM?

iGEM or International Genetically Engineered Machine is a non-profit organization that hosts an international synthetic biology competition for students every year. The aim of the competition is to tackle some local and current problems through synthetic biology.

ABOA 2019

- The first iGEM team from Turku.
- The aim of the project was to improve the sensitivity of the immunoassays used in diagnostic tests.
- The team achieved a silver medal.

ABOA 2021

- The team tried to find a solution to the problem of pharmaceutical waste in the Baltic Sea.
- The aim was to detoxify the nonsteroidal anti-inflammatory drug diclofenac with laccase enzymes produced in microbes.
- The team achieved a silver medal and was nominated in the Best Inclusivity category.
